

# *The Tragedy of Flight: A Comprehensive crash analysis*

## **1 ) Introduction**

### **1.1.Overview**

An airplane crash analysis is a detailed investigation into the causes of an aviation accident. The goal of an airplane crash analysis is to identify any factors that contributed to the accident, with the ultimate goal of improving safety and preventing future accidents. The process conducting an airplane crash analysis typically involves the collection and analysis of a wide range of data, including information about the aircraft and its systems, the operators, and any other relevant factors. This data is typically collected from Kaggle. Once the data has been collected, it is analysed through tableau, to identify any potential causes of the accident. The results of an airplane crash analysis are typically published in a report, which may include recommendations for improving safety and preventing similar accident in the future. These recommendation may be implemented by the relevant authorities or industry organizations.

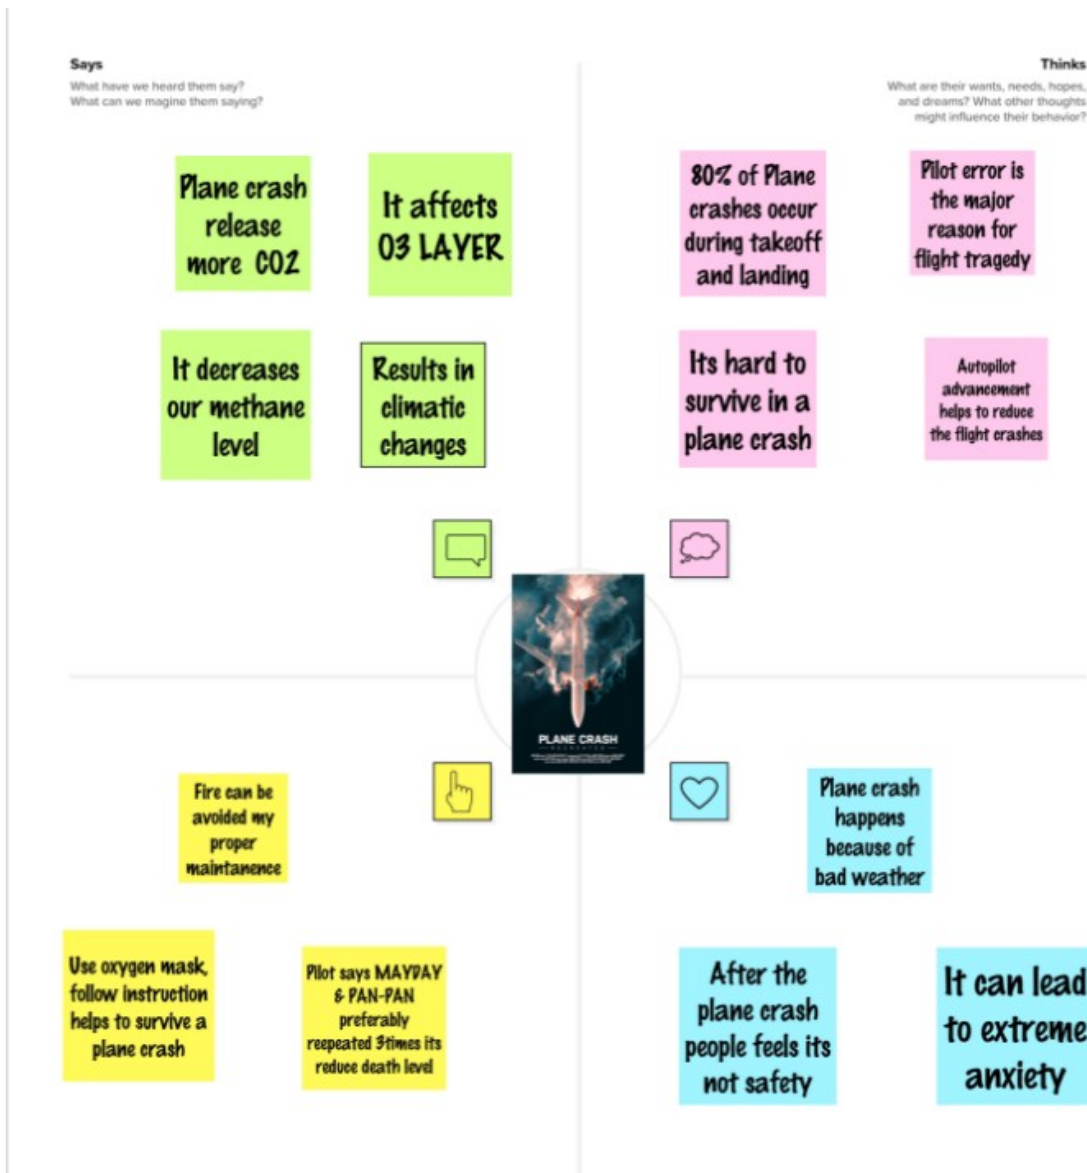

### **1.2. Purpose**

- \* This project helps to identify the factors caused by flight tragedy.

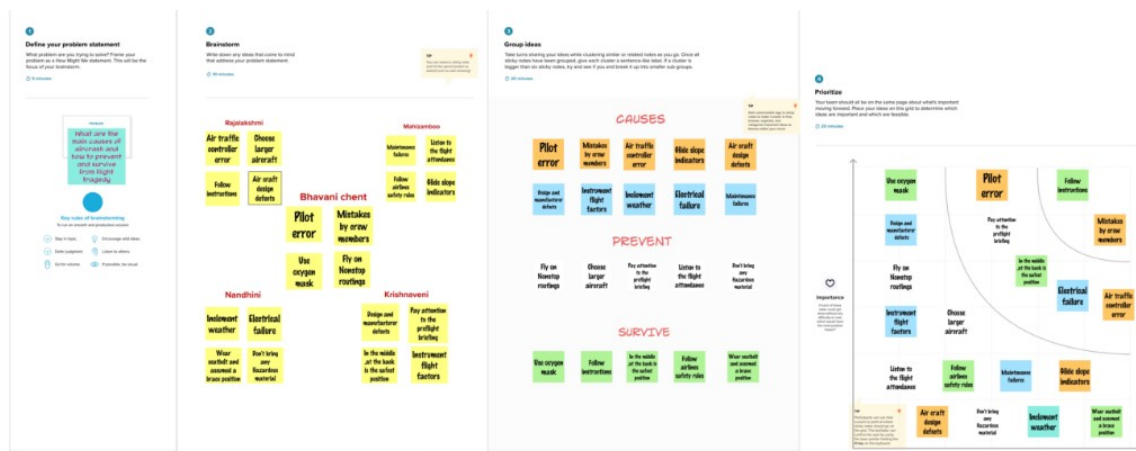

- \* Now we know how to rectify the plane crash.

## **2 )Problem Definition & Design Thinking**

### **2.1.Empathy Map**

## 2.2.Ideation & Brainstorming Map

## 3 ) Result

### Dashboard 1

Max Accidents based on years

Top 3 Flights which have Max accident history

Top 10 locations which had more Accidents

## Dashboard 2

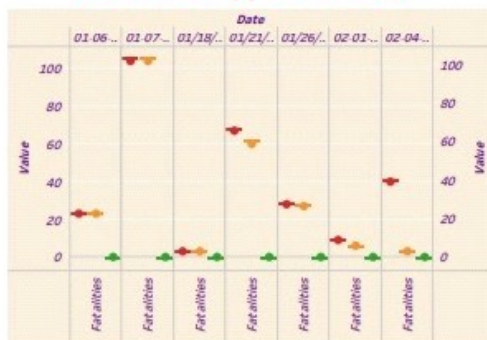

Accidents based on Regions

Aboard vs Fatalities vs Ground

Accidents Happened in 1972

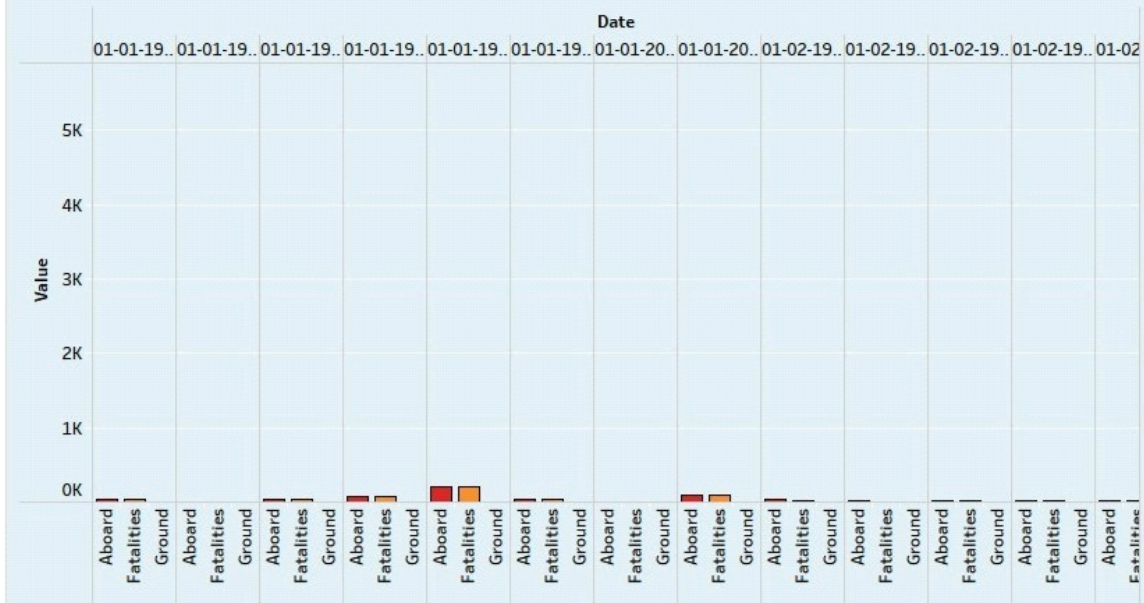

Accidents happened by Operators

## Storys

## Aboard vs Fatalities vs Ground

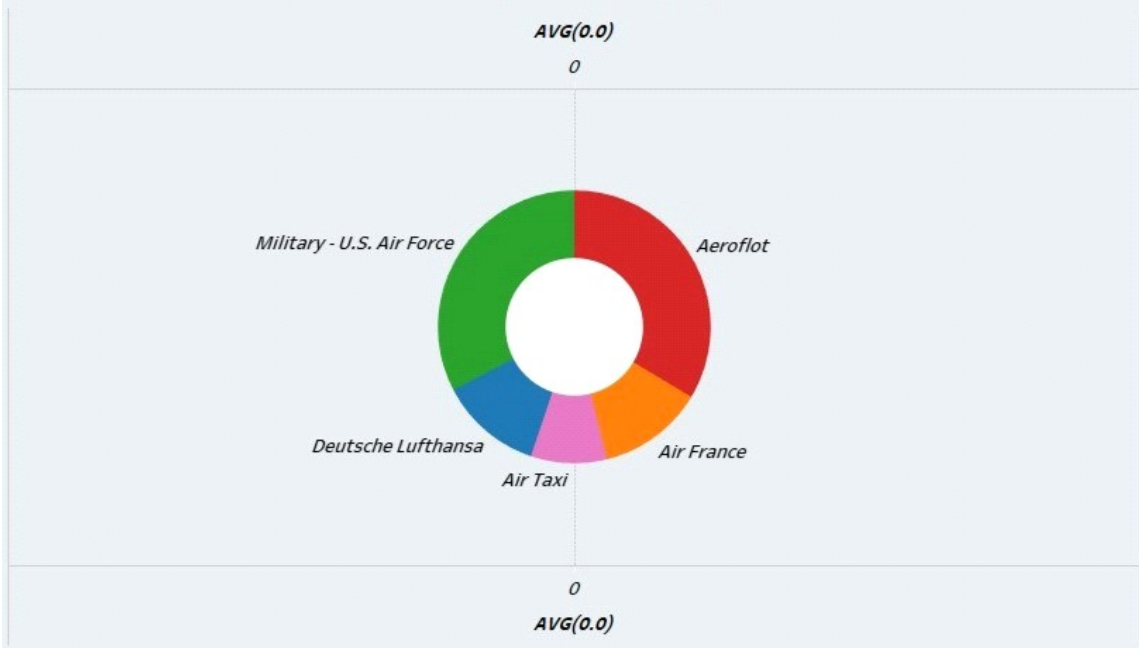

## Max Accidents based on years

## Accidents Happened in 1972

## Accidents happened by Operators

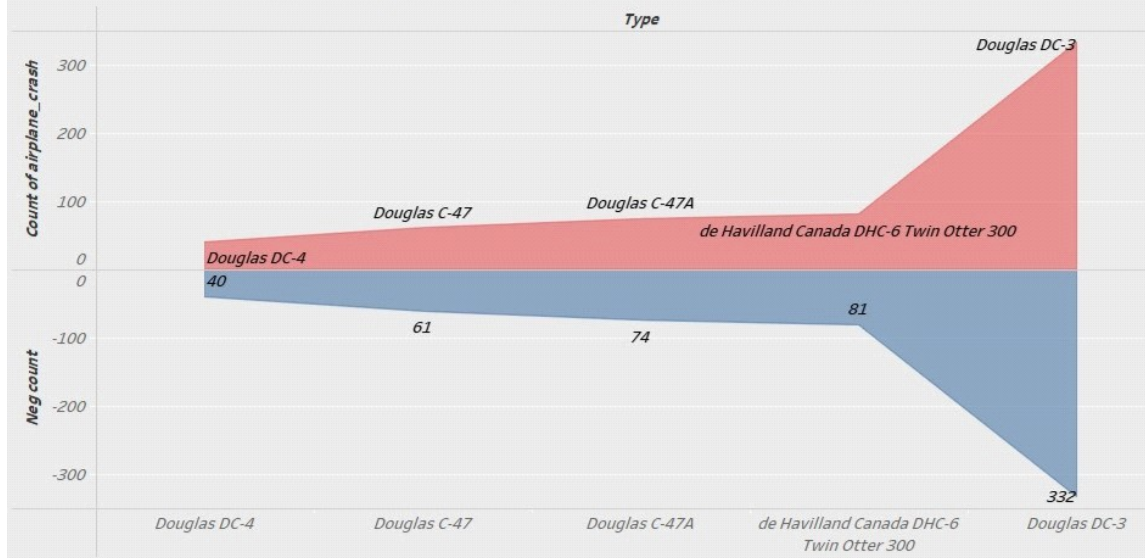

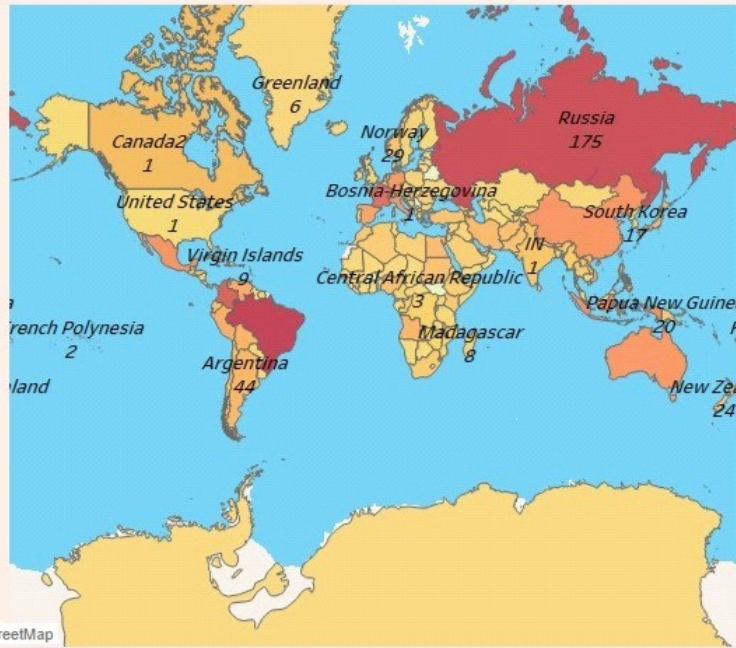

## Top 10 locations which had more Accidents

## Top 3 Flights which have Max accident history

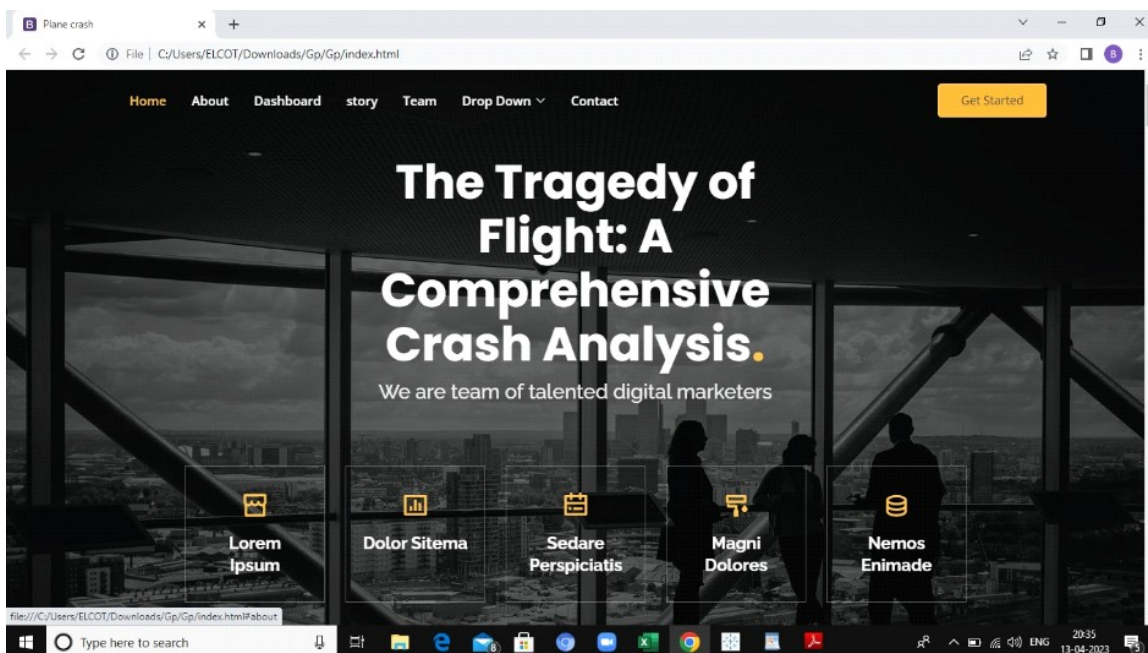

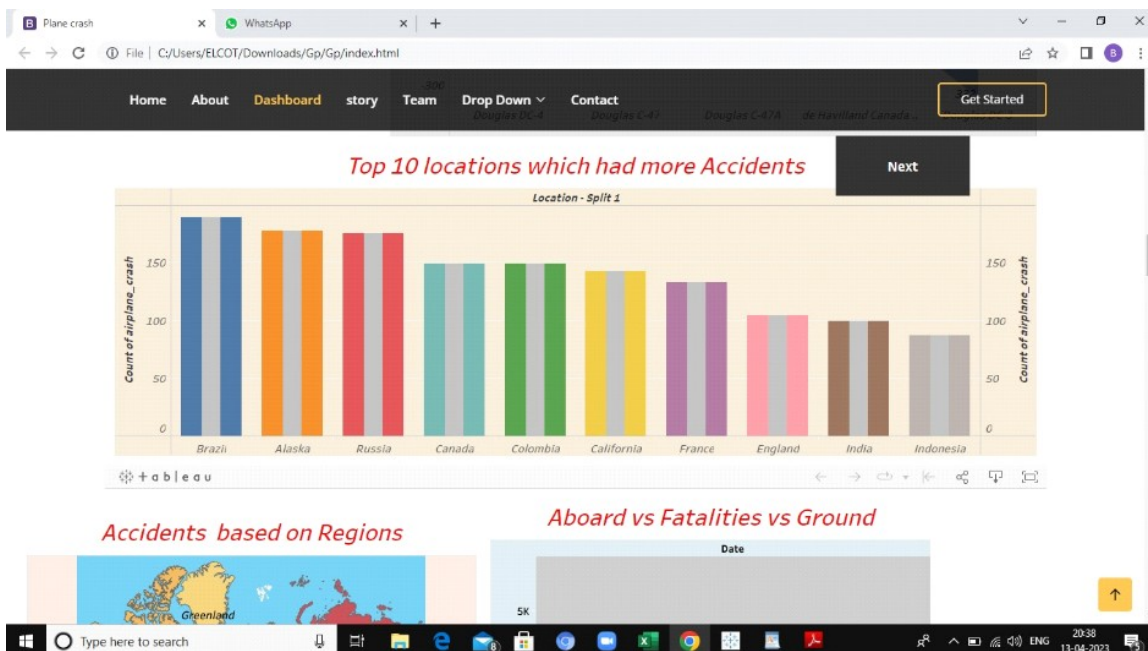

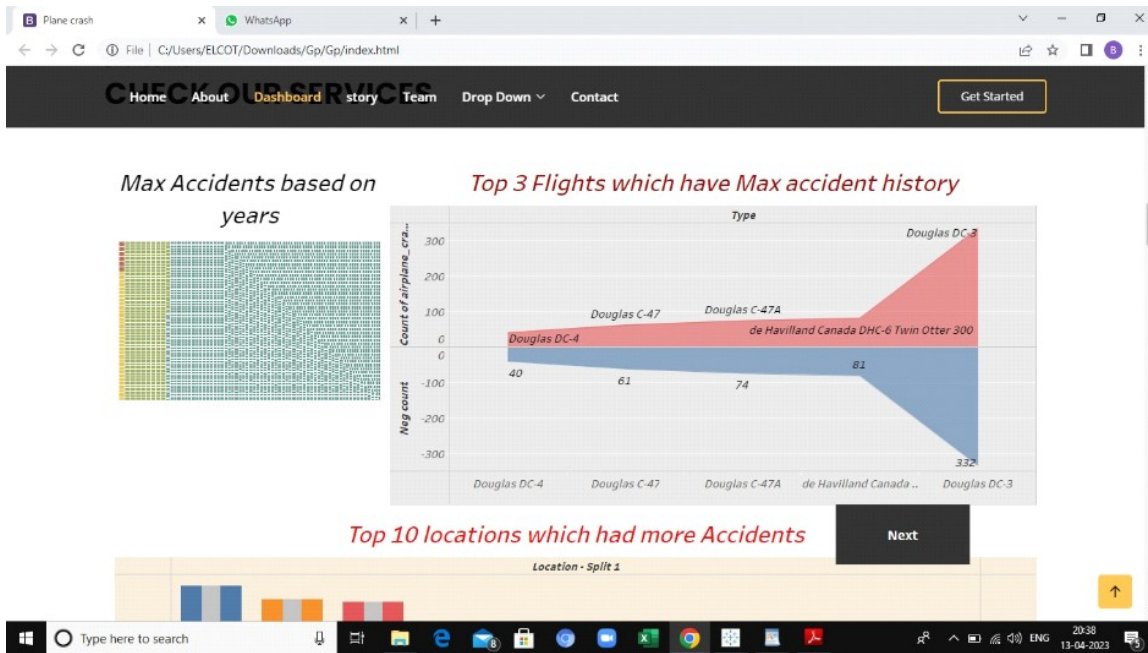

## Accidents based on Regions

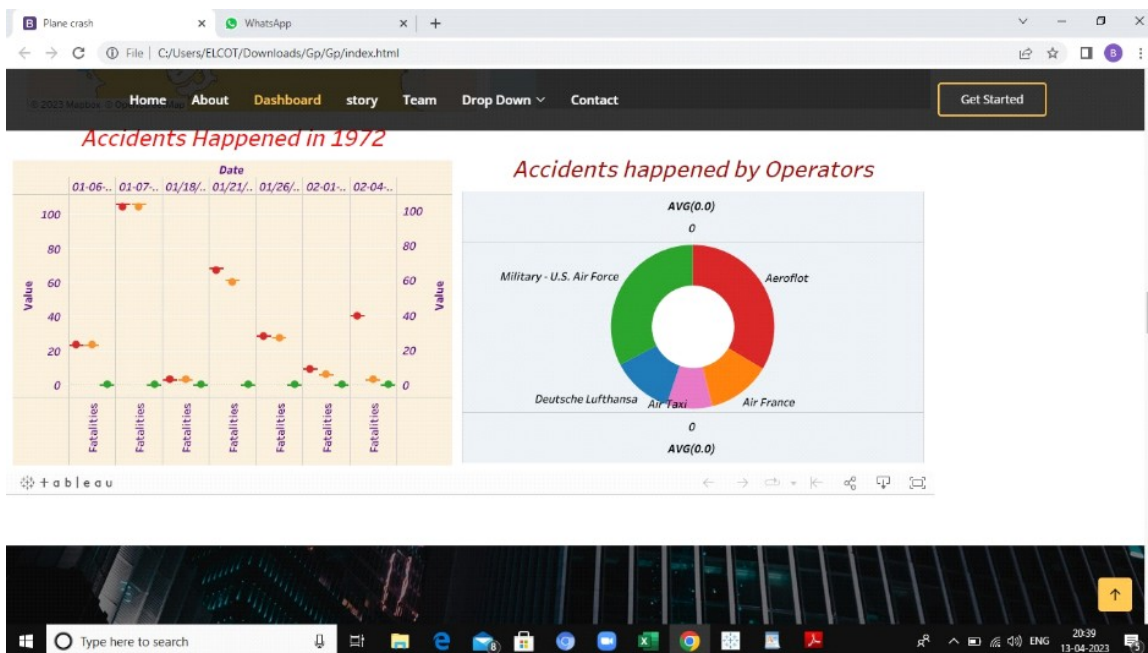

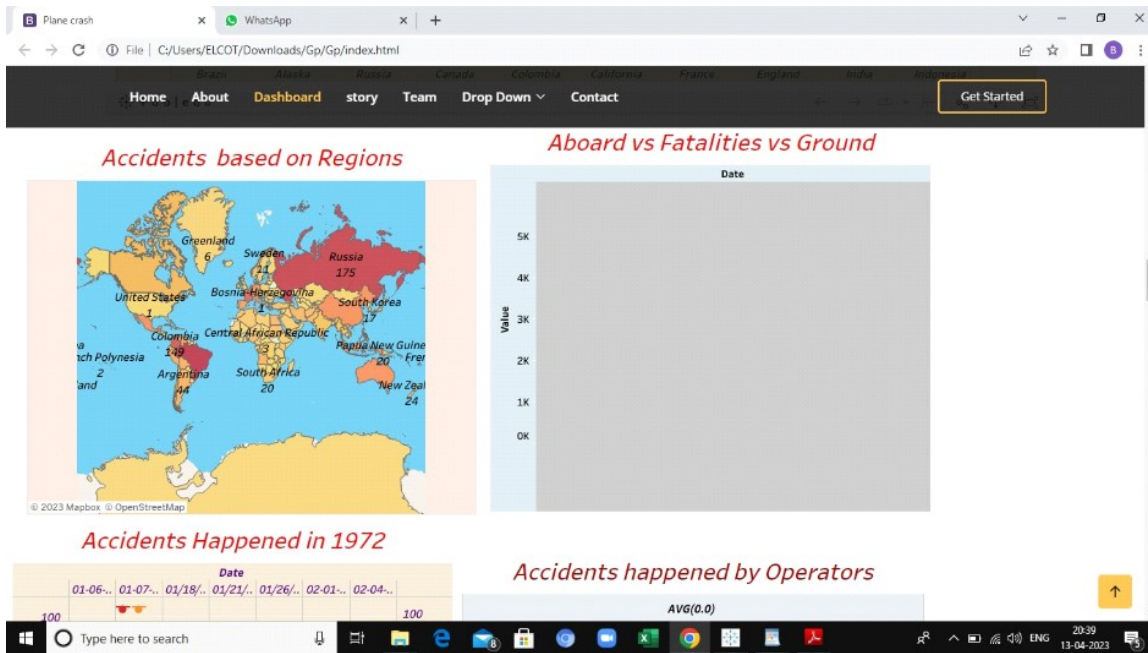

290 unknown

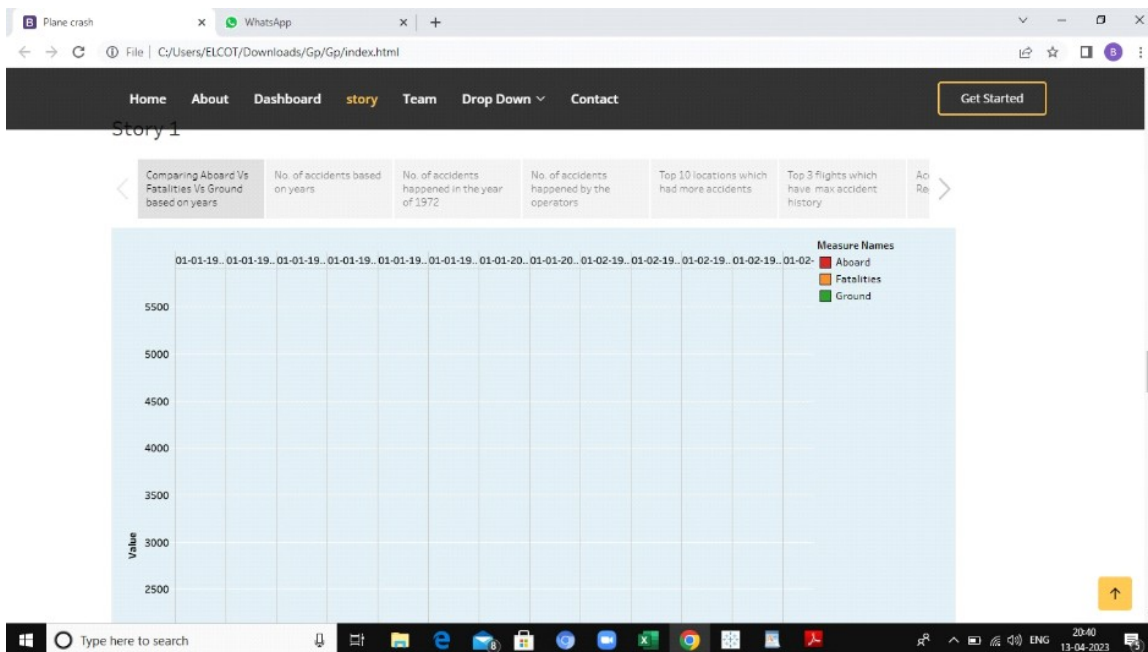

## Web Integration

Most of the accident happened in 1972 & most accident happened because of operators.

#### **4 ) Advantages & Disadvantages**

##### **Advantages:**

- \* The dataset also provides brief descriptions of how each crash happened.
- \* We understand about the importance of safety .
- \* It helps to prevent the accident in future.

##### **Disadvantages:**

- \* Aircrashes release more CO2 results in a climatic changes.
- \* A aircraft goes missing or becomes completely inaccessible.
- \* A person is fatally or seriously injured.

#### **5 ) Applications:**

- \* We think that 80% plane crashes occurs during takeoff and landing because of improper runways, so well planned built airports helps to avoid the accidents.

- \* Air traffic controller mistakes leads to the greatest accidents, so airport authorities carefullness is very important to minimise the flight accidents.

- \* Aircraft maintenance failure leads to dangerous accident. Hence aircraft maintenance is very important to avoid plane crashes.

- \* Maximum accidents occurs by the pilot error. So well trained pilots helps to rectify the accidents.

Hence these application helps to avoid the flight accidents.

## **6 ) Conclusion:**

- \* This analysis provides insites in observing the trends of aircrash over the years.

- \* It shows the percent of fatalities observed due to crash.

- \* The analysis also helps in determining which airline operator and types are worst to fly with.

- \* There are different causes of plane crashes.

- \* By taking some preventive measures the risks can be reduced..

- \* It is important to be prepare for any accident and know what to do in such a situation.

- \* All members of the crew and passengers should be aware of the safety procedure they can act quickly and efficientlly in the event of an accident.

## **7) Future scope:**

- \* Autopilot is the process of computer software to control the aircraft

- \* Autopilot is safer than human. According to the report, Tesla cars with autopilot turned on are much safer than cars driven by people.

- \* Autopilot advancement helps to reduce the flight crashes.

- \* Improves the air traffic control system.

- \* Ground workers have a responsibility for fueling the plane, checking the engine and loading the baggage so they need to be properly trained and follow all safety procedure.

- \* Proper maintenance is very important to avoid flight accidents.

- \* Improve communication between crew and air traffic control.

- \* Avoid flying in areas where there is a high risk of bird strikes.
